MANUAL QA PORTFOLIO

Practical testing documentation • E-commerce websites • November 2026

66	9	9
Test Cases	Bug reports	Exploratory testing notes

Portfolio overview

This portfolio presents manual testing documentation created while evaluating three e-commerce websites: Zvychaina, Yakaboo and Sinsay. It includes structured test cases, documented exploratory observations, demonstrating a practical approach to checking user flows and comparing actual behaviour with expected results.

Testing Scope

Area	Examples covered
Core e-commerce flows	Product search and catalog browsing; filters and sorting; product details; cart operations; checkout and delivery information.
Website usability and UI	Navigation links; responsive layout; text and image presentation; language and regional settings.
External and account-related flows	Social media and app-store links; profile and course interface checks; feedback and flashcard workflows.

Test design techniques represented

Boundary Value Analysis • Equivalence Partitioning • State Transition Testing • Use Case Testing • Decision Table Testing • Functional Testing

A — Test Cases: 66 test cases with scenarios, techniques, preconditions, steps, test data, expected results and recorded actual results.
B — Bug Reports: 9 documented issues with reproduction steps, expected and actual results, severity, priority and status fields
C — Exploratory Testing Notes: 9 observations, including usability notes and items requiring further investigation.
